CryptoGuard becomes Certified Widevine Implementation Partner (CWIP)

CryptoGuard, the Swedish CAS and DRM solutions developer and vendor, announces it has become a Certified Widevine Implementation Partner (CWIP). The CWIP status allows CryptoGuard to perform integration of its Digital Rights Management (DRM) solutions with Google Widevine which is currently deployed on over 2 billion devices.

CryptoGuard is offering the next generation of DRM with support of native DRM systems like Google Widevine, Microsoft PlayReady and iOS Fairplay. These DRM systems are approved by all content providers like Hollywood studios and major TV stations. All current Android, Microsoft and iOS devices are supported like smart phones, tablets, flat screen TV sets and PC / MAC / Laptops. Easy integration tools make it possible for the operator to select any transcoder, packager, origin server, middleware server or OTT end to end solution provider.

ABOUT CRYPTOGUARD

CryptoGuard was established in 2007 in Sweden, and since then it has been an accepted and recommended solution for DVB encryption services all over the world. CryptoGuard is a flexible Conditional Access System (CAS) and Digital Rights Management (DRM) system for digital television. We are using a high-grade encryption scheme to meet the demands of service providers, broadcasters and operators. Our solution works well in all kinds of and any size of network. However, the business model facilitates even for smaller and medium sized operators to use the system.

Currently, CryptoGuard has customers in more than 30 countries and even some national operators have chosen CryptoGuard CAS. CryptoGuard has sales offices in Sweden, France, Poland, Peru, India and Rwanda.

CryptoGuard provides a flexible business model that gives the customers a powerful tool to maximize their profits and efficiency. The flexible business model means that CryptoGuard will always be the best choice, technically and economically, independently on the size of your operation.
